Frontend Developer focused on building responsive, accessible, and interactive web applications using JavaScript, React, and Next.js. Through hands-on, project-based learning, I've built multiple production-style applications covering full user flows — from authentication and data fetching to state management and deployment. I enjoy turning UI designs into clean, maintainable code and am continuously deepening my understanding of JavaScript fundamentals and modern frontend architecture.

PROFESSIONAL PROJECTS

Foody — Food Ordering Web App

In progress — github.com/leowilis/foody-app

- Built the core ordering flow — browsing, cart, checkout, and order history — creating a complete, realistic e-commerce-style user journey from product discovery to order confirmation.
- A code review pointed out my search state wasn't following the rest of the app's data flow, so I moved it into Redux to keep things consistent and avoid random bugs later on.

Library Web App

github.com/leowilis/library-app

- Strengthened type safety and reduced potential runtime errors by replacing loose "any" types with proper TypeScript generics across the entire codebase.
- Implemented role-based route protection (AdminGuard) and ownership-checked review deletion, improving the app's security and preventing unauthorized access to admin and user content.

Social Web App

github.com/leowilis/social-media-apps

- Reduced redundant API calls and improved data consistency by migrating data fetching from manual `useEffect/useState` to TanStack Query, resulting in cleaner, more maintainable code.
- Added optimistic updates for likes and saves (with rollback if something fails), and fixed some auth and routing bugs that were breaking the Vercel deployment.

Movie Explorer App

github.com/leowilis/Movie-app

- Built a Netflix-style hover popup system with a reusable `useCardPopup` hook, improving UI consistency and reducing code duplication across components.
- Improved perceived reliability with skeleton/empty/error states, and improved content discoverability with search, filtering (genre, year, rating), and pagination.

EDUCATION

Ahademy Code — Frontend Development Bootcamp

November 2025 — June 2026

- Intensive project-based program covering React, Next.js, TypeScript, and modern frontend workflows, culminating in four full-stack-connected capstone projects.

CERTIFICATIONS

- Front-End Developer Web Programming Hack — Ahademy Code (Issued July 2026)

ADDITIONAL INFORMATION

- **Languages:** English (Intermediate/B1), Indonesian (Native).
- **Skills:** HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Redux Toolkit, TanStack Query, Axios, Git/GitHub, REST API Integration.
